PACIFIC WILDCAT RESOURCES CORP.
(An exploration stage company)
Notes to Consolidated Financial Statements
For the Six Months Ended December 31, 2008

1. Nature of Operations and Going Concern

Pacific Wildcat Resources Corp. (the "Company") is currently involved in mineral exploration and has not yet determined whether its mineral interests contain ore reserves that are economically recoverable. To date the Company has not earned significant revenues and is considered to be in the exploration stage. The recoverability of resource assets and the associated deferred costs is dependent upon the discovery of economically recoverable reserves, obtaining the necessary exploration permits, adequate financing to complete the exploration and development and future profitable production or net proceeds from the sale of the mineral concessions. Effective October 16, 2003, the Company was transferred from the TSX-V, Tier 2 to the TSX-V, NEX Board.

These consolidated financial statements have been prepared on a going concern basis which assumes the Company will be able to realize on its assets and discharge its liabilities in the normal course of business for the foreseeable future. Accordingly, it does not give effect to adjustments, if any, which would be required to realize its assets and liquidate its liabilities in other than the normal course of business and at amounts which may differ from those shown in the financial statements.

2. Significant Accounting Policies

(a) Basis of Presentation

The consolidated financial statements contained herein include the accounts of the Company and its wholly owned subsidiaries. All significant inter-company balances and transactions have been eliminated upon consolidation.

These interim consolidated financial statements have been prepared by the Company in accordance with Canadian generally accepted accounting principles. All financial summaries included are presented on a comparative and consistent basis showing the figures for the corresponding period in the preceding year. The preparation of financial data is based on accounting principles and practices consistent with those used in the preparation of annual financial statements. Certain information and footnote disclosure normally included in annual financial statements prepared in accordance with Canadian generally accepted accounting principles has been condensed or omitted. These interim period consolidated statements should be read together with the Company's audited consolidated financial statements and the accompanying notes for the year ended June 30, 2008. In the opinion of the Company, its unaudited interim consolidated financial statements contain all adjustments necessary in order to present a fair statement of the results of the interim periods presented.

(b) Consolidation

The consolidated financial statements include the accounts of the Company and its subsidiary Bornite Pty. Ltd. ("Bornite"). All significant inter-company transactions and balances have been eliminated on consolidation.

(c) Use of Estimates

The preparation of financial statements in accordance with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of income and expenses during the period. Significant areas requiring the use of management estimates include financial instruments, the estimation of stock-based compensation, the determination of environmental obligations, impairment of mineral claims and deferred exploration expenditures, useful lives for amortization, and valuation allowances for future tax assets. Actual results could materially differ from those reported.

2. Significant Accounting Policies (continued)

(d) Resource Assets

Costs related to interests in mineral properties, including related acquisition, exploration, development, field support and fixed asset costs are deferred on a project-by-project basis until the properties either achieve commercial production or are abandoned or until management has determined there to be an impairment. Mineral properties, which are sold before that property reaches the production stage, will have all revenues from the sale of the property credited against the cost of the property. Costs relating to properties, which are determined to be impaired or abandoned, are expensed at the time the determination is made. The amount deferred represents costs incurred to date and does not necessarily reflect present or future values. Exploration and related administration costs incurred either prior to the acquisition of properties, or on properties not acquired, are expensed.

The Company is in the process of exploring its resource assets and has not determined the amount of reserves available in its properties. Senior management annually reviews the carrying values of resource assets and assesses whether there has been any impairment in value.

Although the Company has taken steps to verify title to mineral properties in which it has an interest, according to industry standards for the current stage of exploration of such properties, these procedures may not guarantee the Company's title. Properties may be subject to undisclosed prior agreements or transfers and title may be affected by undetected defects.

(e) Asset Retirement Obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the year in which it is incurred when a reasonable estimate of fair value can be made. The carrying amount of the related long-lived asset is increased by the same amount as the liability.

Changes in the liability for an asset retirement obligation due to the passage of time will be measured by applying an interest method of allocation. The amount will be recognized as an increase in the liability and an accretion expense in the statement of operations. Changes resulting from revisions to the timing or the amount of the original estimate of undiscounted cash flows are recognized as an increase or a decrease to the carrying amount of the liability and the related long-lived asset.

(f) Loss per Share

The Company uses the treasury stock method to compute the dilutive effect of options, warrants and similar instruments. Under this method the dilutive effect on earnings per share is recognized on the use of the proceeds that could be obtained upon exercise of options, warrants and similar instruments. It assumes that the proceeds would be used to purchase common shares at the average market price during the period.

Basic loss per share is calculated using the weighted-average number of shares outstanding during the period.

(g) Foreign Currency Translation

The Company's subsidiary is an integrated foreign operation and is translated into Canadian dollars using the temporal method. Monetary items are translated at the exchange rate in effect at the balance sheet date; non-monetary items are translated at historical exchange rates. Income and expense items are translated at rates approximating those in effect at the time of the transaction. Translation gains and losses are reflected in loss for the period.

PACIFIC WILDCAT RESOURCES CORP.
(An exploration stage company)
Notes to Consolidated Financial Statements
For the Six Months Ended December 31, 2008

2. Significant Accounting Policies (continued)

(h) Stock-based Compensation

The fair value of stock options granted is determined using the Black-Scholes option pricing model and recorded as stock based compensation expense over the vesting period of the stock option.

(i) Deferred acquisition costs

Costs, such as legal, accounting, due diligence, sponsorship and filing fees related to potential business acquisitions are deferred and applied towards the cost of the acquisition when completed. Such costs are expensed if the potential acquisition is no longer considered viable by management.

(j) Comprehensive Income

Effective July 1, 2007, the Company adopted the following new accounting standards issued by the Canadian Institute of Chartered Accountants ("CICA") Handbook Section 1530, "Comprehensive Income" which is the change in shareholders' equity during a reporting period from transactions and other events and circumstances from non-owner sources. It includes all changes in equity during a period except those resulting from investments by owners and distributions to owners. Commencing with this year, statements of other comprehensive income are included with the financial statements.

(k) Financial Instruments

Effective July 1, 2007, the Company adopted the following new accounting standards issued by the CICA Handbook Section 3855 "Financial Instruments – Recognition and Measurement". The standard prescribes when a financial asset, financial liability, or non-financial derivative is to be recognized on the balance sheet and whether fair value or cost-based measures are used. In accordance with this new standard, the Company now classifies all financial instruments as either held to maturity, available for sale, held for trading or loans and receivables. Financial assets held to maturity, loans and receivables and financial liabilities other than those held for trading, are measured at amortized costs. Available for sale instruments are measured at fair value with unrealized gains or losses recognized in other comprehensive income. Instruments classified as held for trading are measured at fair value with unrealized gains and losses recognized on the statement of operations.

As a result of the adoption of this new standard, the Company has classified its cash as held-for-trading. Accounts receivable are classified as loans and receivables. Accounts payable and accrued liabilities are classified as other financial liabilities and are measured at amortized cost.

(l) Recent Accounting Pronouncements

Assessing Going Concern

The Accounting Standards Board ("AcSB") amended CICA Handbook Section 1400, to include requirements for management to assess and disclose an entity's ability to continue as a going concern. This section applies to interim and annual financial statements relating to fiscal years beginning on or after January 1, 2008.

PACIFIC WILDCAT RESOURCES CORP.
(An exploration stage company)
Notes to Consolidated Financial Statements
For the Six Months Ended December 31, 2008

2. Significant Accounting Policies (continued)

(l) **Recent Accounting Pronouncements** (continued)

Financial Instruments

The AcSB issued CICA Handbook Section 3862, *Financial Instruments – Disclosures*, which requires entities to provide disclosures in their financial statements that enable users to evaluate (a) the significance of financial instruments for the entity's financial position and performance; and (b) the nature and extent of risks arising from financial instruments to which the entity is exposed during the period and at the balance sheet date, and how the entity manages those risks. The principles in this section complement the principles for recognizing, measuring and presenting financial assets and financial liabilities in Section 3855, *Financial Instruments – Recognition and Measurement*, Section 3863, *Financial Instruments – Presentation*, and Section 3865, *Hedges*. This section applies to interim and annual financial statements relating to fiscal years beginning on or after October 1, 2007.

The AcSB issued CICA Handbook Section 3863, *Financial Instruments – Presentation*, which is to enhance financial statement users' understanding of the significance of financial instruments to an entity's financial position, performance and cash flows. This section establishes standards for presentation of financial instruments and non-financial derivatives. It deals with the classification of financial instruments, from the perspective of the issuer, between liabilities and equity, the classification of related interest, dividends, losses and gains, and the circumstances in which financial assets and financial liabilities are offset. This section applies to interim and annual financial statements relating to fiscal years beginning on or after October 1, 2007.

Capital Disclosures

The AcSB issued CICA Handbook Section 1535, which establishes standards for disclosing information about an entity's capital and how it is managed. This section applies to interim and annual financial statements relating to fiscal years beginning on or after October 1, 2007.

International Financial Reporting Standards (“IFRS”)

In 2006, the Canadian Accounting Standards Board (“AcSB”) published a new strategic plan that will significantly affect financial reporting requirements for Canadian companies. The AcSB strategic plan outlines the convergence of Canadian GAAP with IFRS over an expected five year transitional period. In February 2008, the AcSB announced that 2011 is the changeover date for publicly-listed companies to use IFRS, replacing Canada's own GAAP. The date is for interim and annual financial statements relating to fiscal years beginning on or after January 1, 2011. The transition date of July 1, 2011 will require the restatement for comparative purposes of amounts reported by the Company for the year ended June 30, 2011. While the Company has begun assessing the adoption of IFRS for 2011, the financial reporting impact of the transition to IFRS cannot be reasonably estimated at this time.

The Company does not anticipate that the adoption of the above recent accounting pronouncements will have a significant impact on its consolidated financial statements.

Bolan Acquisition - Mozambique

In April 2008, the Company entered into a Letter of Intent (“LOI”), with Bolan Holdings Limited (“Bolan”), an arm’s length private company incorporated in the Seychelles. The principal security holder of Bolan is Perine Assets Corporation, a British Virgin Isles incorporated company which holds 100% of the issued and outstanding securities of Bolan. Perine Assets Corporation is controlled by Berhard Weber of Singapore and Yunis Shaik of South Africa or his nominee has the option, exercisable at any time, to acquire all of the outstanding shares of Bolan from Perine. The Company will acquire from Bolan all of the issued capital of Tantalum Mineracao e Prospeccao Limitada (“TMP”), a Mozambican company that owns certain mining leases and related assets in Mozambique. In addition to the leases, TMP’s assets include camp facilities, plant and equipment, and some preliminary site construction at Muiane as well as several vehicles.

After several extensions and amendments on January 15, 2009 the LOI was terminated and the Company entered into a new Letter of Intent (“LOI 2009”), dated for reference January 15, 2009, with Bolan.

Under the terms of LOI 2009 the Company will acquire 80% of the issued capital in TMP from Bolan as well as acquiring the remaining 20% of the issued capital of TMP from two arms length private companies.

It is expected that the transaction will constitute a reverse takeover (“RTO”) under the policies of TSX Venture Exchange (the “Exchange”) and will be the basis for the Company graduating from the NEX board to the main board of the Exchange. Upon completion of the transaction, the Company will be in the business of mineral exploration and development with an initial focus on the exploration and development of the TMP mining leases.

3. Deferred Acquisition Costs (continued)

Bolan Acquisition – Mozambique (continued)

Terms of agreement

Under the LOI 2009 and subject to certain conditions precedent, the consideration payable to acquire TMP is as follows:

- (a) On Closing, a cash payment of US\$250,000 and the issuance to Bolan of 13,545,000 shares in PAW; and
- (b) On Closing, the issuance of 2,510,000 shares in PAW to each of the arms length private companies who have each agreed to sell their respective 10% interests in TMP to PAW.

The condition precedents include the completion of both of the transactions in (a) and (b) above, the completion by the Company of a majority arms length financing by March 31, 2009 on a private placement basis that will result in gross proceeds of a minimum of CDN\$2.5m, the completion of due diligence to the satisfaction of the Company, completion of formal documentation between the parties, approval of the Company's shareholders and regulatory acceptance.

Twigg License - Mozambique

In June 2008 the Company signed a heads of agreement with African Eagle Resources plc ("AFE") covering the rights to a 145 square kilometre exploration license in northern Mozambique (the "Twigg Agreement"). This license area, which is currently held in the name of AFE's wholly-owned subsidiary, Twigg Resources Ltd. (the "Twigg License"), is located immediately adjacent to Bolan Holdings ("Bolan") tantalum mining and exploration licenses, which cover over 300 square kilometres (see press release dated April 18, 2008). As with the Bolan licenses, the Twigg License, is considered prospective for tantalum due to the presence of historic mines and pegmatitic host rocks. AFE have historically conducted considerable exploration for gold and base metals (including geochemistry and geological mapping) on the license.

Terms of the agreement

The Agreement stipulates the Company will commit to spend US\$200,000 on an initial work program to be completed over an 18 month period. Following completion of this work program (the "Initial Program"), the Company and AFE shall have the right but not the obligation to conduct further exploration programmes within the Twigg License, either independently or jointly. To the extent that any such further exploration is conducted jointly, each party shall contribute 50% of the exploration expenditure.

At any time after completion of the Initial Program:

- a) The Company may, by giving notice to AFE, identify any part of the Twigg License area as a Company target zone (an area in which tantalum, niobium, lithium and other associated minerals are the dominant value commodities) and thereafter the Company shall bear all expenditure in such target zone (including the costs of any bankable feasibility study) up to the commencement of any mine construction. The construction and operation of any mine of any Company target zone shall be carried out by a mining company in which the Company's initial equity is 80% and AFE's initial equity is 20%; and

PACIFIC WILDCAT RESOURCES CORP.
(An exploration stage company)
Notes to Consolidated Financial Statements
For the Six Months Ended December 31, 2008

3. Deferred Acquisition Costs (continued)

Twigg License – Mozambique (continued)

- b) AFE may, by giving notice to the Company, identify any part of the Twigg License area as an AFE target zone and thereafter AFE shall bear all expenditure in such target zone (including the costs of any bankable feasibility study) up to the commencement of any mine construction. The construction and operation of any mine of any AFE target zone shall be carried out by a mining company in which AFE's initial equity is 80% and PAW's initial equity is 20%.

In the event that either party wishes to proceed with the construction of a mine which is wholly or partially within an area over which both parties have identified target zones, then both parties will negotiate in good faith the means by which the minerals contained in the common zone may be exploited on fair terms.

4. Share Capital

- a) Authorized: Unlimited common shares without par value
 Unlimited preferred shares "Class A" with a par value of \$1.00
 Unlimited preferred shares "Class B" without par value
- b) Common Shares Issued

	Capital Stock		Contributed Surplus
	Number of Shares	Amount	Amount

Stock-based compensation	—	—	18,354
Balance as at June 30, 2008 and December 31, 2008	18,190,476	\$ 11,563,403	\$ 58,414

During the year ended June 30, 2008, the Company completed a non brokered private placement of 2,940,000 common shares at a price of \$0.17 per share for total proceeds of \$499,800.

5. Stock Options and Warrants

- a) Stock Options Outstanding

On August 29, 2008, the Company adopted a new stock option plan whereby directors are authorized to grant up to 10% of the outstanding common shares in stock options to directors, officers, consultants and employees to acquire common shares. The exercise price of the options is no less than the average price for the preceding ten trading days of issuance with each stock option having a maximum term of five years. The board of directors has the exclusive power over the granting of options and their vesting provisions.

Stock option transactions are summarized as follows:

	Number of Options	Weighted Average Exercise Price
Balance, June 30, 2007 and 2008	350,000	\$0.25
Exercisable, December 31, 2008	350,000	\$0.25

PACIFIC WILDCAT RESOURCES CORP.
(An exploration stage company)
Notes to Consolidated Financial Statements
For the Six Months Ended December 31, 2008

5. Stock Options and Warrants (continued)

As at December 31, 2008 the following stock options were outstanding:

Number of Options		Exercise Price	Expiry Date
350,000	\$	0.25	August 29, 2011

b) Warrants

As at December 31, 2008 there were no outstanding warrants.

6. Related Party Transactions

In addition to transactions disclosed elsewhere in these financial statements, the Company as at December 31, 2008 has conducted transactions with officers, directors and persons or companies related to directors as follows:

- a) Paid or accrued consulting fees of \$11,250 (2007 - \$10,908) to a company controlled by an officer of the Company;

As at December 31, 2008:

- a) Due to related parties includes consulting fees of \$94,763 (June 30, 2008 – \$121,313) paid on behalf of the Company and due to a company controlled by common directors.
- b) Due to related parties includes \$250,000 (June 30, 2008 – \$Nil) for loans payable due to companies controlled by common directors.

These transactions were in the normal course of operations and were measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

7. Supplemental Disclosure With Respect to Cash Flows

There were no significant non-cash transactions for the periods ended December 31, 2008 and December 31, 2007.

8. Financial Instruments

The Company's financial instruments consist of cash, receivables, and accounts payable and accrued liabilities. Unless otherwise noted, it is management's opinion that the Company is not exposed to significant interest or credit risks arising from these financial instruments. The fair value of these financial instruments approximates their carrying value, unless otherwise noted.

The Company is exposed to financial risk arising from fluctuations in foreign exchange rates and the degree of volatility of these rates. The Company does not use derivative instruments to reduce its exposure to foreign currency risk.

9. Subsequent Events

During January, 2009 funds in the amount of \$50,000 were advanced to the Company and are due to a company controlled by common directors.

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

MANAGEMENT DISCUSSION AND ANALYSIS

Management's Discussion and Analysis ("MD&A") prepared as of February 2, 2009 supplements, but does not form part of, the unaudited financial statements of the Company and the notes thereto for the six month period ended December 31, 2008. Consequently, this MD&A should be read in conjunction with the Company's audited financial statements for the year ended June 30, 2008 and the notes thereto. The financial statements have been prepared in accordance with Canadian generally accepted accounting principles and all numbers are reported in Canadian dollars.

NATURE OF BUSINESS AND OVERALL PERFORMANCE

Pacific Wildcat Resources Corp. (the "Company" or "Pacific Wildcat") is a mineral exploration company.

Proposed RTO Transaction

In April 2008, the Company entered into a Letter of Intent ("LOI"), with Bolan Holdings Limited ("Bolan"), an arm's length private company incorporated in the Seychelles. The principal security holder of Bolan is Perine Assets Corporation, a British Virgin Isles incorporated company which holds 100% of the issued and outstanding securities of Bolan. Perine Assets Corporation is controlled by Bernhard Weber of Singapore and Yunis Shaik of South Africa or his nominee has the option, exercisable at any time, to acquire all of the outstanding shares of Bolan from Perine. The Company will acquire from Bolan all of the issued capital of Tantalum Mineracao e Prospeccao Limitada ("TMP"), a Mozambican company that owns certain mining leases and related assets in Mozambique. In addition to the leases, TMP's assets include camp facilities, plant and equipment, and some preliminary site construction at Muiane as well as several vehicles.

After several extensions and amendments on January 15, 2009 the LOI was terminated and the Company entered into a new Letter of Intent ("LOI 2009"), dated for reference January 15, 2009, with Bolan

The Company will also acquire from two arms length private companies the remaining 20% of the issued capital of TMP.

It is expected that the transaction will constitute a reverse takeover ("RTO") under the policies of TSX Venture Exchange (the "Exchange") and will be the basis for the Company graduating from the NEX board to the main board of the Exchange. Upon completion of the transaction, the Company will be in the business of mineral exploration and development with an initial focus on the exploration and development of the TMP mining leases.

Terms of Agreement

Under the LOI 2009 and subject to certain conditions precedent, the consideration payable to acquire TMP is as follows:

- (a) On Closing, a cash payment of US\$250,000 and the issuance to Bolan of 13,545,000 shares in PAW for 80% of TMP; and
- (b) On Closing, the issuance of 2,510,000 shares in PAW to each of the arms length private companies who have each agreed to sell their respective 10% interests in TMP to PAW.

The condition precedents include the completion of both of the transactions in (a) and (b) above, the completion by the Company of a majority arms length financing by March 31, 2009 on a private placement basis that will result in gross proceeds of a minimum of CDN\$2.5m, the completion of due diligence to the satisfaction of the Company, completion of formal documentation between the parties, approval of the Company's shareholders and regulatory acceptance.

The LOI 2009 also has provision (subject to TSX approval and Closing of the transaction) for the issuance of shares in PAW in return for certain agreed expenditures that have been incurred by certain consultants in relation to work completed on the transaction (For details please see Sedar news release on January 20, 2009).

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

Company Strategy Post Closure

Upon completion, the planned transaction will position PAW as a new tantalum resource explorer with ownership of a significant ground position in Mozambique containing areas of historic tantalum mining and defined exploration targets. Mozambique is one of the fastest growing and more secure of the African economies driven primarily by large resource developments such as BHP Billiton's Mosul and Corridor Sands projects and CVRD's Moatize coal project.

The Company's strategy will be to aggressively explore delineated targets on the TMP leases with the objective of increasing the existing resource base to a level sufficient to support a five year production plan, at a minimum. In order to achieve this objective, PAW has brought together an outstanding management team who have substantial financial and mining industry experience, some with particular expertise in the tantalite sector.

Longer term, the Company intends to become a major mine supplier to the tantalum market, building out from an operating base in Mozambique.

The Tantalum Market

The mineral tantalite is used in a wide range of electronic devices to regulate power in circuit boards. It is extensively used in modern appliances such as mobile phones and computers. Tantalite also has applications as an alloy to strengthen and provide heat and corrosion resistance.

The supply side of tantalum market is characterized by the exhaustion of the United States strategic stockpile sales, few mines of scale and a lack of new mine developments. The demand side is characterized by few processors of tantalite concentrates and numerous electronic and metals fabricators of tantalum metal.

In addition the Wodgina Mine in Australia, which is the world's largest tantalum producer, has recently been placed on care and maintenance primarily due to the inability of its owner to reach pricing agreement with its customers.

Transaction Process

The Company will immediately commence due diligence and work with its advisers to satisfy all conditions precedent and to comply with all regulatory requirements and approvals.

Board of Directors and Management

Subject to completion of the transaction, the Board of Directors of the Company will be reconstituted and a new management team put in place.

Mr. Darren Townsend, an Australian mining engineer with 15 year's industry experience, has been appointed President and Chief Executive Officer. Darren was previously Mine Manager at the Wodgina tantalum mine in Western Australia - currently the largest producing tantalite mine in the world. Until recently, he was the Managing Director of an Australian based junior exploration company.

Mr. David Paull, an Australian chartered accountant, will become a non-executive Director. David spent many years as the Executive General Manager - Marketing and Business Development with Sons of Gwalia Ltd., then the world's largest tantalite producer. He is currently a Principal of Perth based LVR Fund Pty Ltd., a private investment company, and Retyre Services.

Bolan will be entitled to appoint two directors to the Board of PAW on completion of the transaction.

The Company expects to appoint a new Canadian chairman in conjunction with the completion of the transaction.

Mr. Chris Lalor, an Australian lawyer who has also served with PAW for 13 years, will continue as a non-executive Director. Chris has extensive legal and commercial experience in the mining industry, including the tantalum sector.

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

Additional Agreements

On June 24, 2008 the Company signed a Heads of Agreement (the "Agreement") with African Eagle Resources plc ("AFE") covering the rights to a 145 square kilometre exploration license in northern Mozambique. This license area, which is currently held in the name of AFE's wholly-owned subsidiary, Twigg Resources Ltd. (the "Twigg License"), is located immediately adjacent to Bolan TMP holdings. As with the Bolan licenses, the Twigg License, is considered prospective for tantalum due to the presence of historic mines and pegmatitic host rocks. AFE have historically conducted considerable exploration for gold and base metals (including geochemistry and geological mapping) on the license.

The Agreement stipulates the Company will commit to spend US\$200,000 on an initial work program to be completed over an 18 month period. Following completion of this work program (the "Initial Program"), PAW and AFE shall have the right but not the obligation to conduct further exploration programs within the Twigg License, either independently or jointly. To the extent that any such further exploration is conducted jointly, each party shall contribute 50% of the exploration expenditure.

At any time after completion of the Initial Program:

- a) Pacific Wildcat may, by giving notice to AFE, identify any part of the Twigg License area as a Pacific Wildcat target zone (an area in which tantalum, niobium, lithium and other associated minerals are the dominant value commodities) and thereafter PAW shall bear all expenditure in such target zone (including the costs of any bankable feasibility study) up to the commencement of any mine construction. The construction and operation of any mine of any PAW target zone shall be carried out by a mining company in which PAW's initial equity is 80% and AFE's initial equity is 20%; and
- b) AFE may, by giving notice to Pacific Wildcat, identify any part of the Twigg License area as an AFE target zone and thereafter AFE shall bear all expenditure in such target zone (including the costs of any bankable feasibility study) up to the commencement of any mine construction. The construction and operation of any mine of any AFE target zone shall be carried out by a mining company in which AFE's initial equity is 80% and PAW's initial equity is 20%.

In the event that either party wishes to proceed with the construction of a mine which is wholly or partially within an area over which both parties have identified target zones, then both parties will negotiate in good faith the means by which the minerals contained in the common zone may be exploited on fair terms.

The Agreement is conditional on the Company completing its current Transaction with Bolan.

Summary of quarterly results

	Dec. 31, 2008	Sept. 30, 2008	Jun. 30, 2008	Mar. 31, 2008
Total revenues	\$0	\$0	\$0	\$0

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

Transactions to note in the aforementioned quarter are: In the quarter ended September 30, 2008 the reported loss included legal fees of \$34,267 that were re-classed and capitalized under deferred acquisitions costs in the quarter ended December 31, 2008. In the quarter ended June 30, 2008 the company reported a loss of \$96,204 (\$0.00) which was attributed to higher professional fees of \$28,331 corporate relations of \$26,535, travel of \$37,847 all which were in relation to the increased activities for the Bolan Transaction.

Results of Operations

For the six months ended December 31, 2008

Loss for the period:

During the period ended December 31, 2008 the Company reported a loss of \$71,921 (\$0.00 loss per share) compared to a loss of \$94,550 (\$0.01 loss per share) reported for the 2007 comparative. The decrease and in some cases increase of expenditures to note are discussed below:

Corporate relations increase of expenditures of \$8,079 (\$1,682 – 2007) related to the extraordinary meeting held to approve the Bolan Transaction under the original LOI terms.

Filing fees of \$6,205 (\$12,734 – 2007) were recorded being a decrease from 2007 as \$7500 in 2007 expenses related to Personal Information filing fees to the TSX Venture Exchange regarding the proposed directors on the Bolan transaction.

Management fees of \$4,500 were recorded (\$18,000 – 2007) the decrease related to the change in management effective July 1, 2008.

Professional fees of \$11,250 were recorded (\$22,974 – 2007) the decrease related to legal fees for the current period were capitalized as part of the deferred acquisition costs for the Bolan transaction compared to general legal fees of \$9,656.25 in 2007.

Stockbased compensation for the current period was \$Nil (\$8,354 – 2007) as there were no options granted in the current period.

Transfer agent fees of \$13,080 (\$1,547 – 2007) were recorded the increase related to the extraordinary meeting and printing of materials held in August 2008 regarding the Bolan Acquisition.

Travel costs of \$13,995 (\$19,611 – 2007) decreased as less travel was incurred in the current period due to recent market conditions as in 2007 travel related to marketing for the Bolan Transaction.

Three months ended December 31, 2008

The Company recorded a net loss of \$3,973 (\$0.00 loss per share) compared to \$64,593 for the three months ended December 31, 2007 (\$0.00 loss per share). The decrease in net loss for the current period was attributed to the adjustment for the prior quarter legal fees of \$34,267 re-classed and capitalized under deferred acquisition costs. Increases and decreases in the various expense categories occurred for the same reasons as discussed with respect to the results of operations for the six months ended December 31, 2008.

Financing and capital expenditures

Cash provided in operating activities for the six months December 31, 2008 was \$69,313 compared to cash used in the 2007 comparative of \$52,726. Cash provided for the current quarter was the result of an advance of funds from a related party of \$223,450 (2007 - \$Nil) net of the reduction in accounts payable of \$80,733 (2007 - \$Nil).

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

Cash flows used in investing activities was \$164,462 in relation to the deferred acquisitions costs for the proposed Bolan Acquisition compared to \$161,649 for the comparative six months ended December 31, 2007. These costs included:

		December 31, 2008		December 31, 2007
Acquisition costs	\$	126,155	\$	32,493
Consulting fees		(10,137)		48,220
Holding and administrative costs		40,872		38,025
Technical report		—		26,404
Maps and misc		7,573		10,265
Site visits		—		6,242
	\$	164,463	\$	161,649

In the event the Bolan Transaction does not close these expenses will be written off and expensed accordingly.

Total cash for the period ended December 31, 2008 decreased \$95,149 to an ending balance of \$25,344 compared to an increase of \$285,427 to an ending balance of \$441,798 for the six months ended December 31, 2007.

Liquidity and capital resources

The Company has no internal source of funding and relies on cash on deposit and the sale of treasury shares to provide cash, as required. The future of the Company depends on its ability to raise funds, as needed, to cover anticipated exploration and general and administrative expenses. There is no guarantee that the Company will be able to do this in a timely fashion.

At December 31, 2008 the Company had a working capital deficiency of \$321,510 and no long-term debt. With respect to the working capital deficiency due to related parties is the largest component of \$344,764, this consists of consulting fees in the amount of \$94,763 paid on behalf of the Company by a company with common directors of the Company and also a short term loan advance of \$150,000 advanced by a company with common directors of the Company. These amounts due to related parties will be paid upon completion of the Bolan Acquisition. As at December 31, 2008, \$25,344 was held in cash and \$5,010, in GST current accounts receivable and \$1,500 in prepaid expenses; current accounts payable stood at \$8,601 for legal fees.

The Company's acquisition of TMP is subject to the completion of a considerable financing of which there is no guarantee the Company will be able to secure these funds. In the event the Company is not successful in completing the required financing it will be unable to meet the payment obligations under the Acquisition of TMP.

Off balance-sheet arrangements

The Company has no off balance-sheet arrangements.

Transactions with related parties

In addition to transactions disclosed elsewhere in these financial statements, the Company as at December 31, 2008 has conducted transactions with officers, directors and persons or companies related to directors as follows:

- a) Paid or accrued consulting fees of \$11,250 (2007 - \$10,908) to a company controlled by an officer of the Company;

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

As at December 31, 2008:

- a) Due to related parties includes consulting fees of \$94,763 (June 30, 2008 – \$121,313) paid on behalf of the Company and due to a company controlled by common directors.
- b) Due to related parties includes \$250,000 (June 30, 2008 – \$Nil) for loans payable due to companies controlled by common directors.

These transactions were in the normal course of operations and were measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Outstanding Share Data

- a) Authorized: Unlimited common shares without par value
Unlimited preferred shares "Class A" with a par value of \$1.00
Unlimited preferred shares "Class B" without par value
- b) Number and Recorded Value for Shares Issued and allotted as at February 2, 2009:

- 18,190,476 common shares issued and allotted with a recorded value of \$11,563,403.
- c) The following options, warrants and convertible securities were outstanding as at February 2, 2009:

Type of Security	Number	Exercise Price	Expiry Date
Stock option	350,000	\$0.25	August 29, 2011

- d) The Company did not have any escrowed shares as at February 2, 2009.

Forward Looking Statements

This MD&A may contain forward-looking statements including, but not limited to, comments regarding the timing and content of upcoming work programs, geological interpretations, receipt of property titles, and potential mineral recovery processes. Forward-looking statements address future events and conditions and therefore involve inherent risks and uncertainties. Actual results may differ materially from those currently anticipated in such statements

Accounting Estimates

The information provided in this report including the financial statements, is the responsibility of management. In the preparation of these statements, estimates are sometimes necessary to make a determination of future values for certain assets or liabilities. Management believes such estimates have been based on careful judgments and have been properly reflected in the accompanying financial statements.

Controls and Procedures

During the period ended December 31, 2008, there were no changes to internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

RISK FACTORS

The operations of Pacific Wildcat are speculative due to the high-risk nature of its business, which involves the exploration, and development of mining properties. The following risks should be considered in the event the proposed Bolan Transaction is completed:

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

Risks of Operating in Mozambique

The TMP Properties are located in Mozambique. The assets and operations of the Resulting Issuer are therefore subject to various political, economic and other uncertainties, including, among other things, the risks of war and civil unrest, expropriation, nationalization, renegotiation or nullification of existing licenses, permits, approvals and contracts, taxation policies, foreign exchange and repatriation restrictions, changing political conditions, international monetary fluctuations, currency controls and foreign governmental regulations that favour or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction. Changes, if any, in mining or investment policies or shifts in political attitude in Mozambique may adversely affect the Resulting Issuer's operations or profitability. Operations may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on production, price controls, export controls, currency remittance, income taxes, foreign investment, maintenance of claims, environmental legislation, land use, land claims of local people, water use and mine safety. Failure to comply strictly with applicable laws, regulations and local practices relating to mineral rights, could result in loss, reduction or expropriation of entitlements.

General exploration and mining risks

The Resulting Issuer's business activity will primarily involve tantalum and gemstone exploration and potential mining. As is common with all tantalum and gemstone exploration and mining operations, there is uncertainty and risk associated with the Resulting Issuer's planned activities that may give rise to additional costs and delays. These risks and uncertainties are difficult to predict and are often affected by factors outside the Resulting Issuer's control.

The Resulting Issuer's operations will be subject to, and may be disrupted by, the risks and hazards normally associated with exploration, mining, development and operation of natural resource projects. Many of these risks and hazards are beyond The Resulting Issuer's control, including, but not limited to, geological, geotechnical and seismic factors; fires; power outages; flooding; explosions; land-slides; slope failures; the inability to obtain suitable or adequate machinery; industrial and mechanical accidents; equipment or labour and environmental hazards; and other risks involved in the operation of mines and exploration. Any one of these risks and hazards could have a material adverse impact on the Resulting Issuer's business, operations and financial performance. Although precautions to minimize risk are and will be taken, even a combination of careful evaluation, experience and knowledge may not eliminate all of the hazards and risks.

Estimates of mineral reserves and resources

The mineral resources and mineral reserves data on the TMP leases, while based on NI 43-101, are estimates only and no assurance can be given that the estimated quantities or grades of minerals will be available to extract, or that any particular level of recovery of minerals will in fact be realized. Mineral exploration is speculative in nature and there is uncertainty in any mineral resource or reserve estimate. Therefore, the actual deposits and the grade of mineralization encountered may differ materially from the estimates disclosed in this document.

There can be no guarantee that an identified resource or reserve will continue to qualify as a commercially mineable deposit that can be legally and economically exploited over the medium to long term. The volume and grade of minerals actually recovered and rates of production from the Resulting Issuer's mineral reserves may be less than geological measurement of the reserves. Market price fluctuations in commodities and exchange rates, and changes in operating and capital costs, may in the future render mineral resources uneconomic to mine.

No assurance can be given that the indicated amount of ore or other minerals will be recovered or that it will be recovered at the prices assumed in determining future reserves. Future mineral reserve estimates may be based on limited sampling and, consequently, are uncertain because the samples may not be representative of the entire ore body or mineral resource. As more knowledge and understanding of the ore body and mineral resource are obtained, the reserve estimates may change significantly, either positively or negatively. The exploitation of mineral resources can be affected by such factors as applicable regulations and requirements thereunder, weather, environmental factors, unforeseen technical difficulties, unusual or unexpected geological formations and work interruptions.

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

The estimated resources described in this document should not be interpreted as an assurance of the commercial viability, potential or profitability of any future operations. The Resulting Issuer has engaged RSG Global Consulting Pty Ltd. ("RSG Global"), an independent technical consultant to advise it, with respect to the estimation of mineral resources, and all such estimates contained in this document are extracted without adjustment from the Geological Report. The directors believe that RSG Global is competent and that it has carried out its work in accordance with all internationally recognized industry standards and issued its report in accordance with NI 41-101. Such information reflects various technical conditions prevailing at the date of the report and no assurance can be given as to its accuracy or adequacy. Should such technical conditions change significantly, the Geological Report may no longer be valid and actual results may be more or less favourable.

Additional requirements for capital

Exploration and possible future mining and processing is capital intensive, complex and expensive. Possible future production and processing may require substantial ongoing expenditures. The Resulting Issuer intends to implement a significant exploration program. While the Resulting Issuer has prepared a budget for the implementation of its objectives, there can be no guarantee that additional costs will not be incurred or that budgeted expenditures will be adequate, and this may increase the amount of additional funding required by the Resulting Issuer. No assurances can be given that the Resulting Issuer will be able to raise the additional finance that it may require for its anticipated future exploration or operations and plans on terms acceptable to the Resulting Issuer or at all. If the Resulting Issuer is unable to obtain such funding, or is unable to obtain such funding on satisfactory terms, the Resulting Issuer's implementation of its objectives and planned expansions may be materially adversely affected.

Exploration

Whether or not income will result from the Resulting Issuer's projects depends on the successful establishment of mining operations. Factors including costs, actual mineralization, consistency and reliability of ore grades and mineral prices affect successful project development, as does the design and construction of efficient processing facilities, competent operation and management and prudent financial administration, including the availability and reliability of appropriately skilled and experienced consultants.

Mineral exploration is speculative in nature, involves many risks and frequently is unsuccessful. There can be no assurance that any discovered mineralization will result in an increase in the resources of the Resulting Issuer. If reserves are developed, it can take a number of years from the initial phases of drilling and identification of mineralization until production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish reserves through drilling, to determine processes to extract minerals and, to construct mining and processing facilities. Even if the Resulting Issuer recovers commercial quantities of minerals, there is a risk that it will not achieve a commercial return. For example, the Resulting Issuer may not be able to transport the minerals to commercially viable markets at a reasonable cost or may not be able to sell the minerals to customers at a price and quantity which would cover its operating and other costs.

Exploration and evaluation may be hampered by mining, heritage and environmental legislation, industrial disputes, cost overruns, land claims and compensation and other unforeseen contingencies. Adverse weather conditions over a prolonged period could also negatively affect exploration, mining and drilling operations and the timing of earning revenues.

As a result of these uncertainties, no assurance can be given that the exploration programs undertaken by the Resulting Issuer will result in any new commercial mining operations being brought into operation.

Title to property

While title to and rights over and interests in and relating to, the mining assets have been diligently investigated, this should not be construed as a guarantee of TMP's title to its mining assets. Although the government of Mozambique operates a central mineral register that is expected to be true and accurate, there can be no assurance that title to some of the Resulting Issuer's properties will not be challenged or impugned by other parties claiming conflicting mineral or other land and natural resource related rights over the area. Additionally,

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

the land upon which the Resulting Issuer holds mineral exploration and/or mining rights may not have been surveyed; therefore, the precise area and location of such interests may be subject to challenge. Any defects, if they exist, could adversely affect the Resulting Issuer's title to the affected properties or delay or increase the cost of development of such properties. Moreover, if the land upon which the Resulting Issuer holds mineral exploration and/or mining rights is occupied by other lawful occupants and it becomes necessary to relocate such occupants and their assets so that mineral deposits found in those areas can be developed and mined, the Resulting Issuer will incur relocation and compensation costs in respect of those lawful occupants. This could adversely affect or delay the Resulting Issuer's exploration and possible future development and mining operations on the properties and/or increase the cost of development thereof. TMP must comply with a directive from the Ministry of Mineral Resources (letter dated 30th June 2008) that production commence prior to the 1st September 2010 utilizing a small scale Tantalum processing plant.

Reliance on key future facilities

It is expected that a significant portion of the Resulting Issuer's future revenue will be derived from equity markets. Significant disruption or delays to The Resulting Issuer's exploration operations could have a material adverse effect on the Resulting Issuer's business, operating results and financial condition.

Dependence on relations with third parties

The Resulting Issuer is heavily dependent on its ability to secure reliable supplies of materials and provision of certain services from third-party suppliers, primarily based in South Africa and Australia, in order to carry out its operations. While the Resulting Issuer currently has arrangements in place for some of these materials and services, there can be no guarantee that these arrangements will be sufficient for the Resulting Issuer's future needs or that such supplies or provision of services will not be interrupted or cease altogether.

Some of the materials or services required for the Resulting Issuer's exploration operations are currently only available on commercially reasonable terms from one or a limited number of suppliers or providers. These operations may be interrupted or otherwise adversely affected by lack of supply, or delays in the supply of these materials or services by third party suppliers, by any change to the terms on which these materials or services are made available by third party suppliers and by the failure of third party suppliers to provide materials or services that meet the Resulting Issuer quality requirements. If the Resulting Issuer is forced to change a supplier of such materials or services, there is no guarantee that this would not result in the Resulting Issuer experiencing additional costs, interruptions to supply continuity or some other adverse effect on its business. There is also no guarantee that the Resulting Issuer will be able to find adequate replacement materials or services on a timely basis or at all.

Dependence on key personnel and external contractors

The success of the Resulting Issuer will depend to a significant extent upon its management and a limited number of key employees. While contractual arrangements have been or will be entered into with the aim of securing the services of management and other key employees, the retention of the services cannot be guaranteed. The loss of any member of management or one or more key employees could have a material adverse effect on the Resulting Issuer's business, operating results and financial position. The success of The Resulting Issuer's operations is also dependent to a significant extent on the efforts and abilities of outside specialists, experts and other advisers. Investors must be willing to rely to a significant extent on management's discretion and judgment as well as the expertise and competence of outside contractors, experts and other advisers.

Logistical risks

The Resulting Issuer will depend primarily on road links throughout the Zambezia, Nampula and neighbouring provinces to transport materials and, over long distances between its facilities, Nampula and other locations. Although sufficient for the Resulting Issuer's current exploration operations there can be no guarantee that these transport services will be adequate to support a possible future operation in mining.

Mozambique's physical infrastructure has suffered from a lack of funding and maintenance. Further deterioration of Mozambique's physical infrastructure could disrupt the transportation of goods and supplies, add costs to doing business in Mozambique and interrupt business operations, which could have a material adverse effect on the

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

Resulting Issuer's business and financial position. If these transportation routes became disrupted, it could temporarily impair the Resulting Issuer's ability to complete scheduled exploration programs and thus adversely affect its business and operating results. In addition, seasonal climate changes may severely impact the Resulting Issuer's ability to use these routes.

Power supply

Any possible future operations will depend upon the reliable and continuous delivery of sufficient quantities of power to any possible future mine or processing facilities. TMP currently generates its own power on site using diesel generators. There can be no guarantee that sufficient future supplies of grid power will be available to meet the Resulting Issuer's needs if it starts operation of a mine and processing plant or that, if sufficient power becomes, available, the Resulting Issuer will be able to purchase sufficient power for its needs on commercially acceptable terms or at all.

Employment risks

It is believed that the majority of TMP's workforce in Mozambique is unionized or belongs to a form of organized labor. Although the Resulting Issuer believes that it will have in general good relations with its employees and unions, the operations in Mozambique have from time to time in recent years experienced limited work stoppages and other forms of industrial action. There can be no assurance that the Resulting Issuer operations will not be affected by such problems in the future. In addition, the TMP has been subject to union demands for pay rises and increased benefits which may lead to work stoppages or labour-related demands. There can be no assurance that any work stoppages or other labour-related developments (including the introduction of new labour regulations in countries where the Resulting Issuer operates) will not have a material adverse effect on the Resulting Issuer's exploration activities, operating results and financial position.

The remoteness of TMP's operations in Mozambique, the prevalence of malaria and other tropical diseases, the possibility of being involved in an accident and working in an environment with low levels of radioactivity could result in an employee becoming ill or injured who may seek compensation from the Resulting Issuer on the basis of there being some claimed deficiency in their working conditions.

Employee work permits

Although the Resulting Issuer will have the right to employ expatriates in its Mozambican operations, such expatriates are required to obtain work permits before they are legally entitled to commence work. The procedures regarding the application and issuing of work permits for expatriate staff are cumbersome and time-consuming with each application being subject to review and approval by the Mozambican labour authorities. Therefore, while the Resulting Issuer will make reasonable efforts to obtain work permits for its expatriate employees, because of problems such as the remoteness and distance of its Mozambican operations from the regulatory authorities located in the provincial capital there may be employees who, for a limited period, work on site without having been formally granted a work permit. There can be no assurance that the Resulting Issuer and/or the employee in question will not be charged with a breach of Mozambican immigration and labour laws and that, as a consequence, fines may be levied or the expatriate may be forced to stop work or leave the country until his work permit is in order. These matters could have a material adverse impact on the Resulting Issuer's business.

Furthermore there is no guarantee that the Resulting Issuer will be able to staff its operations with expatriate staff possessing the required technical skills. Although it is expected that the government of Mozambique will implement a new labour code which will make the procedure for hiring expatriates more flexible and less cumbersome, this new legislation is not yet in force. Furthermore, the government of Mozambique may enact new legislation or regulations which restrict the Resulting Issuer's ability to hire expatriates to work in Mozambique. As a consequence although the Resulting Issuer undertakes on-going training for its Mozambican employees, the Resulting Issuer may not be able to staff its exploration operations with employees possessing the appropriate technical skills since such skills are scarce or may not even exist within the domestic Mozambican employment market. This could have a material adverse impact on the Resulting Issuer's business, and financial position.

Security

A high degree of security is required to mitigate the risk of loss by theft of TMP's assets (including mineral assets) either by the Resulting Issuer's employees or third parties. No assurance can be given that the Resulting Issuer will be able to provide effective security in connection with its mineral assets. The Resulting Issuer will not be insured against the risk of theft of its mineral assets as such insurance is not currently available or is uneconomic.

Competition

There is a high degree of competition for the recruitment and retention of employees possessing the required technical skills for services and for access to funds. The Resulting Issuer will be competing for staff and also for financing against competitors that may be larger and better capitalized than it is and that have substantially greater technical and operational resources and staff. There can be no assurance that the Resulting Issuer will be able to recruit the necessary skilled employees or raise the necessary funds to enable it to explore and possibly develop its projects fully in accordance with its current plan on time and to budget. This could have a material adverse impact on the Resulting Issuer's business and financial position.

Environmental and other regulatory requirements

The activities of the Resulting Issuer will be subject to environmental legislation and regulations issued by the Mozambican government. Environmental legislation generally governs restrictions and prohibitions on spills, waste and waste water treatment and further disposal, emissions and discharge requirements, plant and wildlife protection, reclamation and restoration of mining properties before, during and after mining is complete, surface subsidence from underground mining and the effects that mining has on surface and/or groundwater quality and availability. Environmental legislation and regulations also require an impact assessment and management plan to be conducted prior to commencement of mining operations as well as regular environmental reporting obligations. A breach of any of these laws and regulations may result in the imposition of fines and penalties; the imposition of other enforcement action such as curtailment or cessation of operations (whether temporary or permanent) or the making of orders to remedy the effects of violations and/or to take steps against possible future violations. There can be no assurance that compliance with these laws and regulations will not involve significant expenditure by the Resulting Issuer which may adversely affect the Resulting Issuer's business and financial position. Further amendments to current laws, regulations and permits or the introduction of new laws or regulations governing operations and activities of mining companies could have a material adverse impact on the Resulting Issuer and increase its expenditure and costs, or require abandonment of, or cause delays in, developing new mining properties. Any such measures could have a material adverse effect on the Resulting Issuer's business, operating results and financial position.

Radioactivity

The possible future production of tantalum concentrate involves working with minerals which are often slightly radioactive because of the small quantities of uranium and thorium naturally occurring in the ore. Having taken expert advice, the directors believe that appropriate measures are in place for the monitoring of radioactivity levels and the handling of such minerals. However, regulatory changes concerning such materials and their handling, or other matters, in the future may have a material adverse effect on the Resulting Issuer's business, operating results and financial position.

Artisanal miners

A number of roaming artisanal workers are currently involved in unauthorized small-scale mining within the area that will be covered by some of TMP's mineral titles. While the Resulting Issuer expects to offer, in conjunction with MIREM, artisanal miners the right to take part in small scale mining with arrangements in place for the potential purchase of their products, there can be no guarantee that such individuals will take up such rights. In addition, there is a risk that such artisanal miners may oppose the Resulting Issuer's operations which may result in a disruption to the planned exploration work and possible future mining and processing operations. This could have a material adverse effect on the Resulting Issuer's business, operating results and financial position.

Uninsured risks

The Resulting Issuer's business, and the mining industry in general, is subject to significant risks that may occur in the course of exploration, development or production of mineral properties and which could result in damage to,

PACIFIC WILDCAT RESOURCES CORP.
Management Discussion and Analysis
Form 51-102F1

or destruction of, mineral properties or operating facilities, personal injury or death, environmental damage, delays in mining and legal liability. The Resulting Issuer's assets and/or activities will not be and are not currently fully insured. Although the directors expect to take practical steps to ensure that the Resulting Issuer's business is covered by appropriate insurance arrangements where possible, it is not always possible to fully insure against such risks as a result of high premiums, local regulatory approvals or other reasons. In particular, as the insurance industry in Mozambique is not well developed, the Resulting Issuer may well need to obtain coverage from international insurance providers and this may attract a high premium and require local regulatory approvals. Should such liabilities arise, they could have a material adverse effect on the Resulting Issuer's and financial position.

Management of possible future growth

There can be no assurance that the Resulting Issuer would be able to effectively manage any possible future commencement of mining and processing operations from its current exploration systems. TMP's current systems procedures and controls would need to be expanded and strengthened to support possible future growth.

Tantalum and Gemstone Prices

The future price of tantalum and gemstones will significantly affect the development of the Resulting Issuer's Properties. Tantalum and gemstone prices are subject to significant fluctuation and are affected by a number of factors which are beyond the Resulting Issuer's control. Such factors include, but are not limited to, interest rates, exchange rates, inflation or deflation, fluctuation in the value of the United States dollar and foreign currencies, global and regional supply and demand, and the political and economic conditions of major tantalum and gemstone producing countries throughout the world. Depending on the price of tantalum and gemstones, projected cash flow from planned mining operations may not be sufficient and the Resulting Issuer could be forced to discontinue development and may be forced to sell its properties.

Dependence on Limited Properties

The properties will account for all of the Resulting Issuer's mineral resources. Any adverse development affecting the progress of any of these properties may have a material adverse effect on the Resulting Issuer's financial performance and results of operations.

Currency Risk

The Resulting Issuer will use the United States dollar as its functional currency. Fluctuations in the value of the United States dollar relative to the Canadian dollar could have a material impact on The Resulting Issuer's consolidated financial statements by creating gains or losses. No currency hedge policies are in place or are presently contemplated.

Controls and Procedures

During the period ended December 31, 2008, there were no changes to internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Additional information on the Company can be found on SEDAR at www.sedar.com and on the Company's website at www.pacificwildcat.com.
